Level 1 — seed stability at K=6 (cosine, Hungarian-aligned)
A. Six topics (aligned profile distributions)
Cosine similarity to reference
0.9
T0
T1
T2
T3
T4
T5
B. Two hypertopics (mixed profiles)
Favourable
(T0–2)
Unfavourable
(T3–5)
C. Distribution across replicates
Count
median=0.88
IQR=[0.83,0.90]
0.9
Mean cosine over 6 topics
D. Alarm hypertopic (pUF = T3+T4+T5)
median r=0.84
Pearson r (pUF vs reference)
